Review of NIS Directive and Creating a legislative framework for trustworthy AI.

How will regulators help bring about a new digital era? By stimulating investment in trustworthy AI, ensuring data is secure, and encouraging businesses to create innovative solutions.

Data transparency and understandable algorithms, and data-sharing and usage tools.

AI should not cause harm but humans must understand working models need to be explainable to those affected. Learning how AI is used is helping businesses identify areas of potential bias and improve algorithms.

Threat actors employ a wide range of tools to meet their objectives: cyanide (poisons that kill), car bombs (blasts that kill and damage), cyber criminals’ toolkit...
